Pune, Maharashtra | swaranginagdive31@gmail.com | +91 9284610350 | [LinkedIn](#)

PROFESSIONAL SUMMARY

Cloud and Infrastructure Engineer with 4.6+ years of experience across GCP, AWS, and Azure, with hands-on experience in cloud infrastructure engineering, workload migration, Kubernetes, Infrastructure as Code, automation, monitoring and observability, disaster recovery, networking, security, and cost optimization. Experienced in managing production cloud environments, executing infrastructure changes, troubleshooting complex infrastructure issues, and improving reliability, scalability, and availability. Hands-on with GCP Compute Engine, Cloud Run, Cloud Load Balancing, Cloud Storage, Cloud Monitoring, Cloud Functions, Pub/Sub, IAM, AWS EC2, ELB, S3, Kubernetes, Terraform, GitHub Actions, and CI/CD. Contributed to a 30% reduction in GCP infrastructure spend through utilization analysis and resource right-sizing and a 20% reduction in downtime through Compute Engine automation.

SKILLS

Cloud Platforms: GCP, AWS, Microsoft Azure

GCP Services: Compute Engine, Cloud Run, Cloud Load Balancing, Cloud DNS, Cloud Storage, Cloud CDN, Cloud Monitoring, Cloud Logging, Pub/Sub, Cloud Functions, IAM, Cloud Billing, Backup & Disaster Recovery

AWS Services: EC2, Elastic Load Balancing (ELB), IAM, S3, CloudWatch

Networking: VPC, Firewall Rules, VPC Peering, Cloud Router, Interconnect, VPN, Routing, TLS/SSL Certificate Management

Containers & Orchestration: Docker, Kubernetes, Deployments, StatefulSets, Workload Troubleshooting, Rollbacks

Infrastructure as Code & CI/CD: Terraform, GitHub Actions, CI/CD

Monitoring & Observability: Google Cloud Monitoring, Cloud Logging, AWS CloudWatch, Grafana, Stackdriver

Security: Cloud IAM, Cloud Armor, Security Command Center (SCC), Organization Policies

Operating Systems: Linux, Windows, VM-based Infrastructure, Virtualization

Scripting & Automation: Python, Bash, Shell Scripting

Reliability & Engineering: SRE Practices, SLA/SLO, Incident Management, Root Cause Analysis, Disaster Recovery, Cost Optimization

PROFESSIONAL EXPERIENCE

Cloud Reliability Engineer | Searcce | Pune, Maharashtra | March 2022 – August 2026

- Executed cloud workload migration activities across VM-based and cloud environments, covering infrastructure discovery, readiness assessment, target preparation, migration execution, validation, and cutover.
- Performed source infrastructure discovery and assessment, identified workload dependencies, validated prerequisites, and prepared target environments for migration.
- Prepared and validated cloud infrastructure including compute, networking, connectivity, monitoring, and operating-system configurations to ensure migration readiness.
- Managed migration execution and monitored workload health during migration windows, troubleshooting infrastructure and connectivity issues and resolving migration failures.
- Performed pre- and post-migration validation across infrastructure, network connectivity, services, monitoring, and workload availability to ensure successful migration outcomes.
- Managed Linux and Windows VM-based workloads through migration preparation, configuration, patching, maintenance, and production change activities.
- Executed cutover activities during scheduled migration and production change windows, validating application and infrastructure availability following migration.
- Troubleshot migration-related infrastructure issues, performed root cause analysis, and worked with cross-functional technical teams to drive resolution of complex blockers.
- Maintained migration and infrastructure documentation covering architecture details, migration procedures, validation results, troubleshooting steps, and post-migration outcomes.
- Managed and improved production GCP and AWS cloud infrastructure with focus on availability, scalability, reliability, performance, and operational readiness.
- Implemented and optimized monitoring, logging, and alerting using Cloud Monitoring, Cloud Logging, AWS CloudWatch, and Grafana to improve infrastructure visibility.
- Managed Kubernetes workloads including deployments, updates, rollbacks, pod troubleshooting, and Deployment and StatefulSet operations.
- Used Terraform and CI/CD workflows to manage repeatable infrastructure changes and maintain consistent cloud configurations across environments.
- Designed and supported disaster recovery environments using Compute Engine, VPC, Load Balancing, Firewall Rules, Cloud Router, VPC Peering, Interconnect, monitoring, SSL certificates, Linux, and Windows.

- Performed GCP infrastructure utilization analysis and resource right-sizing based on workload requirements and utilization trends, contributing to a 30% reduction in infrastructure spend.
- Designed and implemented Compute Engine auto-restart automation using Cloud Monitoring, Alerting, Pub/Sub, Cloud Functions, Compute Engine, and IAM, contributing to a 20% reduction in downtime associated with high server utilization.
- Worked on cloud security and access controls including IAM permissions, service accounts, least-privilege access, VPC/firewall configuration, Cloud Armor, SCC, and Organization Policies.
- Developed cloud infrastructure assessment and wellness reports covering reliability, performance, security, configuration, and billing insights, translating findings into actionable engineering recommendations.
- Supported SRE practices through reliability-focused operations, SLA/SLO support, incident analysis, service health monitoring, and continuous improvement initiatives.
- Collaborated with application, network, security, platform, and client teams to plan infrastructure changes, resolve technical issues, execute production activities, and improve service reliability.

KEY PROJECTS

GCP Compute Engine Auto-Restart Automation - IFL

- Designed and implemented an automated solution to manage Compute Engine instances based on resource-utilization alerts.
- Integrated Cloud Monitoring, Alerting, Pub/Sub, Cloud Functions, Compute Engine, and IAM to automate resource-management activities.
- Configured alert-driven workflows to identify high-utilization conditions and trigger automated instance actions.
- Contributed to a 20% reduction in downtime associated with high server utilization through automated remediation.

Disaster Recovery Implementation - Tata Steel

- Supported reconstruction of a production environment as part of a disaster recovery and business continuity initiative.
- Worked with Compute Engine, VPC, Load Balancing, Firewall Rules, Cloud Router, VPC Peering, Interconnect, Monitoring, Alerting, SSL certificates, Linux, and Windows.
- Configured and validated infrastructure, network connectivity, monitoring, and service readiness across the DR environment.
- Performed post-implementation validation to ensure critical infrastructure components and services were available for recovery scenarios.

Kubernetes Container Management

- Managed containerized applications using Kubernetes, including application deployments, updates, and rollbacks.
- Worked with Kubernetes Deployment and StatefulSet controllers for managing application workloads.
- Troubleshot pod, workload, and infrastructure-related issues and performed root cause analysis for recurring problems.
- Worked with application and infrastructure teams to maintain availability and fault tolerance for containerized workloads.

GCP Cost Optimization

- Conducted GCP infrastructure assessments by analyzing resource utilization and identifying underutilized infrastructure.
- Analyzed utilization trends and workload requirements to determine appropriate resource right-sizing opportunities.
- Implemented and validated resource optimization changes while monitoring post-change utilization and performance.
- Contributed to a 30% reduction in GCP infrastructure spend through infrastructure optimization and right-sizing.

Cloud Workload Migration

- Executed migration activities for VM-based and cloud workloads, covering source discovery, infrastructure assessment, and target preparation.
- Performed readiness checks covering compute, networking, connectivity, operating systems, and monitoring before migration.
- Monitored migration activities, troubleshot infrastructure and connectivity issues, and performed failure triage during migration windows.
- Performed post-migration validation and cutover activities to confirm workload availability, connectivity, services, and monitoring.

EDUCATION

Bachelor's in Computer Technology | Kavikulguru Institute of Technology and Science, Ramtek | 2021

CERTIFICATIONS

- Google Cloud Certified - Professional Cloud DevOps Engineer | January 2025
- Google Cloud Certified - Professional Cloud Architect | February 2024
- Google Cloud Certified - Associate Cloud Engineer | August 2022
- Google Cloud Certified - Cloud Digital Leader | December 2023
